Summary and Review
In just a few moments I was to meet my first Yanomamö, my first primitive man. What would it be like? . . . I looked up (from my canoe) and gasped when I saw a dozen burly, naked, filthy, hideous men staring at us down the shafts of their drawn arrows. Immense wads of green tobacco were stuck between their lower teeth and lips, making them look even more hideous, and strands of dark-green slime dripped or hung from their noses. We arrived at the village while the men were blowing a hallucinogenic drug up their noses. One of the side effects of the drug is a runny nose. The mucus is always saturated with the green powder, and the Indians usually let it run freely from their nostrils. . . . I just sat there holding my notebook, helpless and pathetic . . .

The whole situation was depressing, and I wondered why I ever decided to switch from civil engineering to anthropology in the first place. . . . (Soon) I was covered with red pigment, the result of a dozen or so complete examinations. . . . These examinations capped an otherwise grim day. The Indians would blow their noses into their hands, flick as much of the mucus off that would separate in a snap of the wrist, wipe the residue into their hair, and then carefully examine my face, arms, legs, hair, and the contents of my pockets. I said (in their language), “Your hands are dirty”; my comments were met by the Indians in the following way: they would “clean” their hands by spitting a quantity of slimy tobacco juice into them, rub them together, and then proceed with the examination.

This is how Napoleon Chagnon describes the cultural shock he felt when he met the Yanomamö tribe of the rain forests of Brazil. His ensuing months of fieldwork continued to bring surprise after surprise, and often Chagnon (1977) could hardly believe his eyes—or his nose.
If you were to list the deviant behaviors of the Yanomamö, what would you include? The way they appear naked in public? Use hallucinogenic drugs? Let mucus hang from their noses? Or the way they rub hands filled with mucus, spittle, and tobacco juice over a frightened stranger who doesn’t dare to protest? Perhaps. But it isn’t this simple, for as we shall see, deviance is relative.

What Is Deviance?

Sociologists use the term deviance to refer to any violation of norms, whether the infraction is as minor as driving over the speed limit, as serious as murder, or as humorous as Chagnon’s encounter with the Yanomamö. This deceptively simple definition takes us to the heart of the sociological perspective on deviance, which sociologist Howard S. Becker (1966) described this way: It is not the act itself, but the reactions to the act, that make something deviant. What Chagnon saw disturbed him, but to the Yanomamö those same behaviors represented normal, everyday life. What was deviant to Chagnon was conformist to the Yanomamö. From their viewpoint, you should check out strangers the way they did, and nakedness is good, as are hallucinogenic drugs and letting mucus be “natural.”

Chagnon’s abrupt introduction to the Yanomamö allows us to see the relativity of deviance, a major point made by symbolic interactionists. Because different groups have different norms, what is deviant to some is not deviant to others. (See the photo on this page.) This principle holds both within a society as well as across cultures. Thus, acts that are acceptable in one culture—or in one group within a society—may be considered deviant in another culture, or by another group within the same society. This idea is explored in the Cultural Diversity box on the next page.

This principle also applies to a specific form of deviance known as crime, the violation of rules that have been written into law. In the extreme, an act that is applauded by one group may be so despised by another group that it is punishable by death. Making a huge profit on business deals is one example. Americans who do this are admired. Like Donald Trump, Jack Welch, and Warren Buffet, they may even write books about their exploits. In China, however, until recently this same act was considered a crime called profiteering. Anyone who was found guilty was hanged in a public square as a lesson to all.

Unlike the general public, sociologists use the term deviance nonjudgmentally, to refer to any act to which people respond negatively. When sociologists use this term, it does not mean that they agree that an act is bad, just that people judge it negatively. To sociologists, then, all of us are deviants of one sort or another, for we all violate norms from time to time.

To be considered deviant, a person does not even have to do anything. Sociologist Erving Goffman (1963) used the term stigma to refer to characteristics that discredit people. These include violations of norms of ability (blindness, deafness, mental handicaps) and norms of appearance (a facial birthmark, obesity). They also include involuntary memberships, such as being a victim of AIDS or the brother of a rapist. The stigma can become a person’s master status, defining him or her as deviant. Recall from Chapter 4 that a master status cuts across all other statuses that a person occupies.

How Norms Make Social Life Possible

No human group can exist without norms, for norms make social life possible by making behavior predictable. What would life be like if you could not predict what others would do? Imagine for a moment that you have gone to a store to purchase milk:

Suppose the clerk says, “I won’t sell you any milk. We’re overstocked with soda, and I’m not going to sell anyone milk until our soda inventory is reduced.”
WHAT IS DEVIANCE?

HUMAN SEXUALITY ILLUSTRATES HOW A GROUP’S DEFINITION OF AN ACT, NOT THE ACT ITSELF, DETERMINES WHETHER IT WILL BE CONSIDERED DEVIANT. LET’S LOOK AT SOME EXAMPLES REPORTED BY ANTHROPOLOGIST ROBERT EDDERTON (1976).

Norms of sexual behavior vary so widely around the world that what is considered normal in one society may be considered deviant in another. In Kenya, a group called the Pokot place high emphasis on sexual pleasure, and they expect that both a husband and wife will reach orgasm. If a husband does not satisfy his wife, he is in trouble—especially if she thinks his failure is because of adultery. If this is so, the wife and her female friends will sneak up on her husband when he is asleep. The women will tie him up, shout obscenities at him, beat him, and then urinate on him. As a final gesture of their contempt, before releasing him, they will slaughter and eat his favorite ox. The husband’s hours of painful humiliation are intended to make him more dutiful concerning his wife’s conjugal rights.

People can also become deviants for failing to understand that the group’s ideal norms may not be its real norms. As with many groups, the Zapotec Indians of Mexico profess that sexual relations should take place exclusively between husband and wife. Yet the only person in one Zapotec community who had not had any extramarital affairs was considered deviant. Evidently, these people have an unspoken understanding that married couples will engage in affairs, but be discreet about them. When a wife learns that her husband is having an affair, she usually has one, too.

One Zapotec wife did not follow this covert norm. Instead, she would praise her own virtue to her husband—and then voice the familiar “headache” excuse. She also told other wives the names of the women their husbands were sleeping with. As a result, this virtuous woman was condemned by everyone in the village. Clearly, real norms can conflict with ideal norms—another illustration of the gap between ideal and real culture.

For Your Consideration

How do the behaviors of the Pokot wife and husband look from the perspective of U.S. norms? Are there U.S. norms in the first place? How about the Zapotec woman? The rest of the Zapotec community? How does cultural relativity apply? (We discussed this concept in Chapter 2, pages 41–42.)
Sanctions
As we discussed in Chapter 2, people do not enforce folkways strictly, but they become upset when people break mores (MORE-rays). Expressions of disapproval of deviance, called **negative sanctions**, range from frowns and gossip for breaking folkways to imprisonment and capital punishment for breaking mores. In general, the more seriously the group takes a norm, the harsher the penalty for violating it. In contrast, **positive sanctions**—from smiles to formal awards—are used to reward people for conforming to norms. Getting a raise is a positive sanction; being fired is a negative sanction. Getting an *A* in intro to sociology is a positive sanction; getting an *F* is a negative one.

Most negative sanctions are informal. You might stare if you observe someone dressed in what you consider to be inappropriate clothing, or you might gossip if a married person you know spends the night with someone other than his or her spouse. Whether you consider the breaking of a norm merely an amusing matter that warrants no severe sanction or a serious infraction that does, however, depends on your perspective. If a woman appears at your college graduation ceremonies in a bikini, you may stare and laugh, but if this is your mother, you are likely to feel that different sanctions are appropriate. Similarly, if it is your father who spends the night with an 18-year-old college freshman, you are likely to do more than gossip.

**Shaming and Degradation Ceremonies**
*Shaming* is another sanction. Shaming is especially effective when members of a primary group use it. For this reason, parents sometimes use it to keep children in line. Shaming is also effective in small communities, where the individual’s reputation is at stake. As our society grew large and urban, its sense of community diminished, and shaming lost its effectiveness. Shaming seems to be making a comeback. One Arizona sheriff makes the men in his jail wear pink underwear (Boxer 2001). Digital cameras and camera cell phones have encouraged online shaming sites. They feature bad drivers, older men who leer at teenaged girls, and dog walkers who don’t pick up their dog’s poop (Saranow 2007). Some sites include photos of the offenders, as well as their addresses and phone numbers.

In small communities, shaming can be the centerpiece of the enforcement of norms, with the violator marked as a deviant and held up for all the world to see. In Nathaniel Hawthorne’s *The Scarlet Letter*, town officials forced Hester Prynne to wear a scarlet A sewn on her dress. The A stood for *adulteress*. Wherever she went, Prynne had to wear this badge of shame, and the community expected her to wear it every day for the rest of her life.

Sociologist Harold Garfinkel (1956) gave the name **degradation ceremony** to formal attempts to brand someone as an outsider. The individual is called to account before the group, witnesses denounce him or her, the offender is pronounced guilty, and steps are taken to strip the individual of his or her identity as a group member. In some court martials, officers who are found guilty stand at attention before their peers while the insignia of rank are ripped from their uniforms. This procedure dramatizes that the individual is no longer a member of the group. Although Hester Prynne was not banished from the group physically, she was banished morally; her degradation ceremony proclaimed her a *moral* outcast from the community. The scarlet A marked her as “not one” of them.

Although we don't use scarlet A's today, informal degradation ceremonies still occur. Consider what happened to Joseph Gray (Chivers 2001):

Joseph Gray, a fifteen-year veteran of the New York City police force, was involved in a fatal accident. The *New York Times* and New York television stations reported that Gray had spent the afternoon drinking in a topless bar before plowing his car into a vehicle carrying a pregnant woman, her son, and her sister. All three died. Gray was accused of manslaughter and drunk driving. (He was later convicted on both counts.)

The news media kept hammering this story to the public. Three weeks later, as Gray left police headquarters after resigning from his job, an angry crowd gathered around...
him. Gray hung his head in public disgrace as Victor Manuel Herrera, whose wife and son were killed in the crash, followed him, shouting, “You're a murderer!”

**IN SUM**

In sociology, the term *deviance* refers to all violations of social rules, regardless of their seriousness. The term is not a judgment about the behavior. Deviance is relative, for what is deviant in one group may be conformist in another. Consequently, we must consider deviance from within a group’s own framework, for it is their meanings that underlie their behavior. The following Thinking Critically section focuses on this issue.

**Thinking Critically**

*Is It Rape, Or Is It Marriage? A Study in Culture Clash*

Surrounded by cornfields, Lincoln, Nebraska, is about as provincial as a state capital gets. Most of its residents have little experience dealing with people who come from different ways of life. Their baptism into cultural diversity came as a shock.

The wedding was traditional and followed millennia-old Islamic practices (Annin and Hamilton 1996). A 39-year-old immigrant from Iraq had arranged for his two eldest daughters, ages 13 and 14, to marry two fellow Iraqi immigrants, ages 28 and 34. A Muslim cleric flew in from Ohio to perform the ceremony.

Nebraska went into shock. So did the immigrants. What is marriage in Iraq is rape in Nebraska. The husbands were charged with rape, the girls’ father with child abuse, and their mother with contributing to the delinquency of minors.

The event made front page news in Saudi Arabia, where people shook their heads in amazement at Americans. Nebraskans shook their heads in amazement, too.

In Fresno, California, a young Hmong immigrant took a group of friends to a local college campus. There, they picked up the Hmong girl whom he had selected to be his wife (Sherman 1988; Lacayo 1993b). The young men brought her to his house, where he had sex with her. The young woman, however, was not in agreement with this plan.

The Hmong call this *zij poj niam*, “marriage by capture.” For them, this is an acceptable form of mate selection, one that mirrors Hmong courtship ideals of strong men and virtuous, resistant women. The Fresno District Attorney, however, called it kidnapping and rape.

*Degradation ceremonies* are intended to humiliate norm violators and mark them as “not members” of the group. This photo was taken by the U.S. army in 1945 after U.S. troops liberated Cherbourg, France. Members of the French resistance shaved the heads of these women, who had “collaborated” (had sex with) the occupying Nazis. They then marched the shamed women down the streets of the city, while the public shouted insults and spat on them.
As migration intensifies, other countries are experiencing similar culture shock. Germans awoke one morning to the news that a 28-year-old Turkish man had taken his 11-year-old wife to the registry office in Dusseldorf to get her an ID card. The shocked officials detained the girl and shipped her back to Turkey (Stephens 2006).

In Bishkek, Kyrgyzstan, a former republic of the Soviet Union, one father said that he wouldn’t mind if a man kidnapped his daughter to marry her. “After all,” he said, “that’s how I got my wife” (Smith 2005).

**for your Consideration**

To apply *symbolic interactionism* to these real-life dramas, ask how the perspectives of the people involved explain why they did what they did. To apply *functionalism*, ask how the U.S. laws that were violated are “functional” (that is, what are their benefits, and to whom?). To apply *conflict theory*, ask what groups are in conflict in these examples. (Do not focus on the individuals involved, but on the groups to which they belong.)

Understanding events in terms of different theoretical perspectives does not tell us which reaction is “right” when cultures clash. Science can analyze causes and consequences, but it cannot answer questions of what is “right” or moral. Any “ought” that you feel about these cases comes from your values, which brings us, once again, to the initial issue: the relativity of deviance.

### Competing Explanations of Deviance: Sociology, Sociobiology, and Psychology

If social life is to exist, norms are essential. So why do people violate them? To better understand the reasons, it is useful to know how sociological explanations differ from biological and psychological ones.

*Sociobiologists* explain deviance by looking for answers *within* individuals. They assume that *genetic predispositions* lead people to such deviances as juvenile delinquency and crime (Lombroso 1911; Wilson and Herrnstein 1985; Goozen et al. 2007). Among their explanations are the following three theories: (1) intelligence—low intelligence leads to crime; (2) the “XYY” theory—an extra Y chromosome in males leads to crime; and (3) body type—people with “squarish, muscular” bodies are more likely to commit *street crime*—acts such as mugging, rape, and burglary.

How have these theories held up? We should first note that most people who have these supposedly “causal” characteristics do not become criminals. Regarding intelligence, you already know that some criminals are very intelligent, and that most people of low intelligence do not commit crimes. Regarding the extra Y chromosome, most men who commit crimes have the normal XY chromosome combination, and most men with the XYY combination do not become criminals. No women have this combination of genes, so this explanation can’t even be applied to female criminals. Regarding body type, criminals exhibit the full range of body types, and most people with “squarish, muscular” bodies do not become street criminals.

*Psychologists* also focus on abnormalities *within* the individual. They examine what are called *personality disorders*. Their supposition is that deviating individuals have deviating personalities (Barnes 2001; Mayer 2007), and that subconscious motives drive people to deviance. No specific childhood experience, however, is invariably linked with deviance. For example, children who had “bad toilet training,” “suffocating mothers,” or “emotionally aloof fathers” may become embezzling bookkeepers—or good accountants. Just as college students, teachers, and police officers represent a variety of bad—and good—childhood experiences, so do deviants. Similarly, people with “suppressed anger” can become freeway snipers or military heroes—or anything else. In short, there is no inevitable outcome of any childhood experience. Deviance is not associated with any particular personality.

In contrast with both sociobiologists and psychologists, *sociologists* search for factors *outside* the individual. They look for social influences that “recruit” people to break norms. To account for why people commit crimes, for example, sociologists examine such external influences as socialization, membership in subcultures, and social class.
Social class, a concept that we will discuss in depth in Chapter 10, refers to people’s relative standing in terms of education, occupation, and especially income and wealth.

The point stressed earlier, that deviance is relative, leads sociologists to ask a crucial question: Why should we expect to find something constant within people to account for a behavior that is conforming in one society and deviant in another?

To see how sociologists explain deviance, let’s contrast the three sociological perspectives—symbolic interactionism, functionalism, and conflict theory.

The Symbolic Interactionist Perspective

As we examine symbolic interactionism, it will become more evident why sociologists are not satisfied with explanations that are rooted in biology or personality. A basic principle of symbolic interactionism is this: We act according to our interpretations of situations, not according to blind predisposition. Let’s consider how our membership in groups influences our views of life and thus affects our behavior.

Differential Association Theory

The Theory

Contrary to theories built around biology and personality, sociologists stress that people learn deviance. Edwin Sutherland coined the term differential association to indicate that we learn to deviate from or conform to society’s norms primarily from the different groups we associate with (Sutherland 1924, 1947; Sutherland et al. 1992). On the most obvious level, some boys and girls join street gangs, while others join the Scouts. As sociologists have repeatedly demonstrated, what we learn influences us toward or away from deviance (Deflem 2006; Chambliss 1973/2007).

Sutherland’s theory is actually more complicated than this, but he basically said that deviance is learned. This goes directly against the view that deviance is due to biology or personality. Sutherland stressed that the different groups with which we associate (our “differential association”) give us messages about conformity and deviance. We may receive mixed messages, but we end up with more of one than the other (an “excess of definitions,” as Sutherland put it). The end result is an imbalance—attitudes that tilt us more toward one direction than another. Consequently, either we conform or we deviate.

Families

Since our family is so important for teaching us attitudes, it probably is obvious to you that the family makes a big difference in whether we learn deviance or conformity. Researchers have confirmed this informal observation. They have found that delinquents are more likely to come from families that get in trouble with the law. Of the many studies that show this, one stands out: Of all jail inmates across the United States, almost half have a father, mother, brother, sister, or spouse who has served time in prison (Sourcebook of Criminal Justice Statistics 2003:Table 6.0011). In short, families that are involved in crime tend to set their children on a lawbreaking path.

Friends, Neighborhoods, and Subcultures

Most people don’t know the term differential association, but they do know how it works. Most parents want to move out of “bad” neighborhoods because they know that if their kids have delinquent friends, they are likely to become delinquent, too. Sociological research supports this common observation (Miller 1958; Chung and Steinberg 2006; Yonas et al. 2006). Some neighborhoods even develop a subculture of violence. In these places, even a teasing remark can mean instant death. If the neighbors feel that a victim deserved to be killed, they refuse to testify because “he got what was coming to him” (Kubrin and Weitzer 2003).
Some neighborhoods even develop subcultures in which killing is considered an honorable act:

Sociologist Ruth Horowitz (1983, 2005), who did participant observation in a lower-class Chicano neighborhood in Chicago, discovered how associating with people who have a certain concept of “honor” propels young men to deviance. The formula is simple. “A real man has honor. An insult is a threat to one's honor. Therefore, not to stand up to someone is to be less than a real man.”

Now suppose you are a young man growing up in this neighborhood. You likely would do a fair amount of fighting, for you would interpret many things as attacks on your honor. You might even carry a knife or a gun, for words and fists wouldn't always be sufficient. Along with members of your group, you would define fighting, knifing, and shooting quite differently from the way most people do.

Members of the Mafia also intertwine ideas of manliness with violence. For them, to kill is a measure of their manhood. Not all killings are accorded the same respect, however, for “the more awesome and potent the victim, the more worthy and meritorious the killer” (Arlacchi 1980). Some killings are done to enforce norms. A member of the Mafia who gives information to the police, for example, has violated omertà (the Mafia's vow of secrecy). This offense can never be tolerated, for it threatens the very existence of the group. Mafia killings further illustrate just how relative deviance is. Although killing is deviant to mainstream society, for members of the Mafia, not to kill after certain rules are broken—such as when someone “squeals” to the cops—is the deviant act.

Prison or Freedom? As was mentioned in Chapter 3, an issue that comes up over and over again in sociology is whether we are prisoners of socialization. Symbolic interactionists stress that we are not mere pawns in the hands of others. We are not destined to think and act as our group memberships dictate. Rather, we help to produce our own orientations to life. By joining one group rather than another (differential association), for example, we help to shape the self. For instance, one college student may join a feminist group that is trying to change the treatment of women in college; another may associate with a group of women who shoplift on weekends. Their choice of groups points them in different directions. The one who associates with shoplifters may become even more oriented toward criminal activities, while the one who joins the feminist group may develop an even greater interest in producing social change.

Control Theory

Inside most of us, it seems, are desires to do things that would get us in trouble—inner drives, temptations, urges, hostilities, and so on. Yet most of the time we stifle these desires. Why?

The Theory Sociologist Walter Reckless (1973), who developed control theory, stresses that two control systems work against our motivations to deviate. Our inner controls include our internalized morality—conscience, religious principles, ideas of right and wrong. Inner controls also include fears of punishment, feelings of integrity, and the desire to be a “good” person (Hirschi 1969; Rogers 1977; McShane and Williams 2007). Our outer controls consist of people—such as family, friends, and the police—who influence us not to deviate.

The stronger our bonds are with society, the more effective our inner controls are (Hirschi 1969). Bonds are based on attachments (feeling affection and respect for people who
conform to mainstream norms), commitments (having a stake in society that you don't want to risk, such as a respected place in your family, a good standing at college, a good job), involvements (putting time and energy into approved activities), and beliefs (believing that certain actions are morally wrong).

This theory can be summarized as self-control, says sociologist Travis Hirschi. The key to learning high self-control is socialization, especially in childhood. Parents help their children to develop self-control by supervising them and punishing their deviant acts (Gottfredson and Hirschi 1990).

**Applying the Theory**

Suppose that some friends have invited you to a night club. When you get there, you notice that everyone seems unusually happy—almost giddy would be a better word. They seem to be euphoric in their animated conversations and dancing. Your friends tell you that almost everyone here has taken the drug Ecstasy, and they invite you to take some with them.

What do you do? Let’s not explore the question of whether taking Ecstasy in this setting is a deviant or a conforming act. That is a separate issue. Instead, concentrate on the pushes and pulls you would feel. The pushes toward taking the drug: your friends, the setting, and your curiosity. Then there are the inner controls: the inner voices of your conscience and your parents, perhaps of your teachers, as well as your fears of arrest and of the dangers of illegal drugs. There are also the outer controls—perhaps the uniformed security guard looking in your direction.

So, what did you decide? Which was stronger: your inner and outer controls or the pushes and pulls toward taking the drug? It is you who can best weigh these forces, for they differ with each of us.

**Labeling Theory**

Symbolic interactionists have developed labeling theory, which focuses on the significance of the labels (names, reputations) that we are given. Labels tend to become a part of our self-concept, and help to set us on paths that either propel us into or divert us from deviance. Let’s look at how people react to society’s labels—from “whore” and “pervert” to “cheat” and “slob.”

**Rejecting Labels: How People Neutralize Deviance**

Most people resist the negative labels that others try to pin on them. Some are so successful that even though they persist in deviance, they still consider themselves conformists. For example, even though they beat up people and vandalize property, some delinquents consider themselves to be conforming members of society. How do they do it?

Sociologists Gresham Sykes and David Matza (1957/1988) studied boys like this. They found that the boys used five techniques of neutralization to deflect society’s norms.

*Denial of Responsibility* Some boys said, “I’m not responsible for what happened because . . .” and then they were quite creative about the “becauses.” Some said that what happened was an “accident.” Other boys saw themselves as “victims” of society. What else could you expect? They were like billiard balls shot around the pool table of life.

*Denial of Injury* Another favorite explanation of the boys was “What I did wasn’t wrong because no one got hurt.” They would define vandalism as “mischief,” gang fights as a “private quarrel,” and stealing cars as “borrowing.” They might acknowledge that what they did was illegal, but claim that they were “just having a little fun.”

*Denial of a Victim* Some boys thought of themselves as avengers. Vandalizing a teacher’s car was done to get revenge...
for an unfair grade, while shoplifting was a way to even the score with “crooked” store owners. In short, even if the boys did accept responsibility and admit that someone had gotten hurt, they protected their self-concept by claiming that the people “deserved what they got.”

**Condemnation of the Condemners** Another technique the boys used was to deny that others had the right to judge them. They might accuse people who pointed their fingers at them of being “a bunch of hypocrites”: The police were “on the take,” teachers had “pets,” and parents cheated on their taxes. In short, they said, “Who are they to accuse me of something?”

**Appeal to Higher Loyalties** A final technique the boys used to justify antisocial activities was to consider loyalty to the gang more important than following the norms of society. They might say, “I had to help my friends. That’s why I got in the fight.” Not incidentally, the boy may have shot two members of a rival group, as well as a bystander!

**In sum:** These five techniques of neutralization have implications far beyond this group of boys, for it is not only delinquents who try to neutralize the norms of mainstream society. Look again at these five techniques—don’t they sound familiar? (1) “I couldn’t help myself”; (2) “Who really got hurt?”; (3) “Don’t you think she deserved that, after what she did?”; (4) “Who are you to talk?”; and (5) “I had to help my friends—wouldn’t you have done the same thing?” All of us attempt to neutralize the moral demands of society, for neutralization helps us to sleep at night.

**Embracing Labels: The Example of Outlaw Bikers** Although most of us resist attempts to label us as deviant, some people revel in a deviant identity. Some teenagers, for example, make certain by their clothing, choice of music, hairstyles, and “body art” that no one misses their rejection of adult norms. Their status among fellow members of a subculture—within which they are almost obsessive conformists—is vastly more important than any status outside it.

One of the best examples of a group that embraces deviance is motorcycle gangs. Sociologist Mark Watson (1980/2006) did participant observation with outlaw bikers. He rebuilt Harleys with them, hung around their bars and homes, and went on “runs” (trips) with them. He concluded that outlaw bikers see the world as “hostile, weak, and effeminate.” They pride themselves on looking “dirty, mean, and generally undesirable” and take pleasure in provoking shocked reactions to their appearance and behavior. Holding the conventional world in contempt, they also pride themselves on getting into trouble, laughing at death, and treating women as lesser beings whose primary value is to provide them with services—especially sex. Outlaw bikers also regard themselves as losers, a factor that becomes woven into their unusual embrace of deviance.

**The Power of Labels: The Saints and the Roughnecks** We can see how powerful labeling is by referring back to the study of the “Saints” and the “Roughnecks” that was cited in Chapter 4 (page 121). As you recall, both groups of high school boys were “constantly occupied with truancy, drinking, wild parties, petty theft, and vandalism.” Yet their teachers looked on the Saints as “headed for success” and the Roughnecks as “headed for trouble.” By the time they finished high school, not one Saint had been arrested, while the Roughnecks had been in constant trouble with the police.

Why did the members of the community perceive these boys so differently? Chambless (1973/2007) concluded that this split vision was due to social class. As symbolic interactionists emphasize, social class vitally affects our perceptions and behavior. The Saints came from respectable, middle-class families, while the Roughnecks were from less respectable, working-class families. These backgrounds led teachers and the authorities to expect good behavior from the Saints but trouble from the Roughnecks. And, like the rest of us, teachers and police saw what they expected to see.

The boys’ social class also affected their visibility. The Saints had automobiles, and they did their drinking and vandalism outside of town. Without cars, the Roughnecks
hung around their own street corners, where their drinking and boisterous behavior drew the attention of police and confirmed the negative impressions that the community already had of them.

The boys' social class also equipped them with distinct styles of interaction. When police or teachers questioned them, the Saints were apologetic. Their show of respect for authority elicited a positive reaction from teachers and police, allowing the Saints to escape school and legal problems. The Roughnecks, said Chambliss, were “almost the polar opposite.” When questioned, they were hostile. Even when they tried to assume a respectful attitude, everyone could see through it. Consequently, while teachers and police let the Saints off with warnings, they came down hard on the Roughnecks.

Although what happens in life is not determined by labels alone, the Saints and the Roughnecks did live up to the labels that the community gave them. As you may recall, all but one of the Saints went on to college. One earned a Ph.D., one became a lawyer, one a doctor, and the others business managers. In contrast, only two of the Roughnecks went to college. They earned athletic scholarships and became coaches. The other Roughnecks did not fare so well. Two of them dropped out of high school, later became involved in separate killings, and were sent to prison. One became a local bookie, and no one knows the whereabouts of the other.

How do labels work? Although the matter is complex, because it involves the self-concept and reactions that vary from one individual to another, we can note that labels open and close doors of opportunity. Unlike its meaning in sociology, the term deviant in everyday usage is emotionally charged with a judgment of some sort. This label can lock people out of conforming groups and push them into almost exclusive contact with people who have been similarly labeled.

**IN SUM** Symbolic interactionists examine how people's definitions of the situation underlie their deviating from or conforming to social norms. They focus on group membership (differential association), how people balance pressures to conform and to deviate (control theory), and the significance of the labels that are given to people (labeling theory).

The label deviant involves competing definitions and reactions to the same behavior. This central point of symbolic interactionism is explored in the Mass Media box on the next page.

**The Functionalist Perspective**

When we think of deviance, its dysfunctions are likely to come to mind. Functionalists, in contrast, are as likely to stress the functions of deviance as they are to emphasize its dysfunctions.

**Can Deviance Really Be Functional for Society?**

Most of us are upset by deviance, especially crime, and assume that society would be better off without it. The classic functionalist theorist Emile Durkheim (1893/1933, 1895/1964), however, came to a surprising conclusion. Deviance, he said—including crime—is functional for society, for it contributes to the social order. Its three main functions are:

1. Deviance clarifies moral boundaries and affirms norms. A group's ideas about how people should think and act mark its moral boundaries. Deviant acts challenge those boundaries. To call a member into account is to say, in effect, “You broke an important rule, and we cannot tolerate that.” Punishing deviants affirms the group's norms and clarifies what it means to be a member of the group.

2. Deviance promotes social unity. To affirm the group's moral boundaries by punishing deviants fosters a “we” feeling among the group's members. In saying, “You can't get away with that,” the group collectively affirms the rightness of its own ways.
Pornography vividly illustrates one of the sociological principles discussed in this chapter: the relativity of deviance. It is not the act, but reactions to the act, that make something deviant. Consider one of today’s major issues, pornography on the Internet.

Web surfers have such a wide choice of pornography that some sites are indexed by race-ethnicity, hair color, body type, heterosexual or gay, single or group, teenagers, cheerleaders, and older women who “still think they have it.” Some offer only photographs, others video. There also are live sites. After signing in and agreeing to the hefty per-minute charges, you can command your “model” to do anything your heart desires. The Internet sex industry even has an annual trade show, Internext. Predictions at Internext are that hotels will soon offer not just sex videos on demand but also live images of people having sex with three-year-olds (Johnston 2007).

What is the problem? Why can’t people exchange nude photos electronically if they want to? Or watch others having sex online, if someone offers that service? Although some people object to any kind of sex site, what disturbs many are the sites that feature bondage, torture, rape, bestiality (humans having sex with animals), and sex with children.

The Internet abounds with chat rooms, where people “meet” online to discuss some topic. No one is bothered by the chat rooms where the topic is Roman architecture or rap music or sports. But those whose focus is how to torture women are another matter. So are those that offer lessons on how to seduce grade school children—or that extol the delights of having sex with three-year-olds.

The state and federal governments have passed laws against child pornography, and the police seize computers and search them for illegal pictures. The penalties can be severe. When photos of children in sex acts were found on an Arizona man’s computer, he was sentenced to 200 years in prison (Greenhouse 2007). When he appealed his sentence as unconstitutional, his sentence was upheld. To exchange pictures of tortured and sexually abused women, however, remains legal.

**for your Consideration**

Some people feel that no matter how much they may disagree with a point of view or find it repugnant, communications about it (including photos and videos) must be allowed. They believe that if we let the government censor the Internet in any way, it will censor other communications. Do you think it should be legal to exchange photos of women being sexually abused or tortured? Should it be legal to discuss ways to seduce children? If not, on what basis should they be banned? If we make these activities illegal, then what other communications should we prohibit? On what basis?

Finally, can you disprove the central point of the symbolic interactionists—that an activity is deviant only because people decide that it is deviant? You may use examples cited in this box, or any others that you wish. You cannot invoke God or moral absolutes in your argument, however, as they are outside the field of sociology. Sociology cannot decide moral issues, even in extreme cases.

3. **Deviance promotes social change.** Groups do not always agree on what to do with people who push beyond their accepted ways of doing things. Some group members may even approve of the rule-breaking behavior. Boundary violations that gain enough support become new, acceptable behaviors. Thus, deviance may force a group to rethink and redefine its moral boundaries, helping groups—and whole societies—to change their customary ways.

**Strain Theory: How Social Values Produce Deviance**

Functionalists argue that crime is a natural part of society, not an aberration or some alien element in our midst. Indeed, they say, some mainstream values actually generate crime. To understand what they mean, consider what sociologists Richard Cloward and Lloyd Ohlin (1960) identified as the crucial problem of the industrialized world: the need to locate and train the most talented people of every generation—whether they were born into wealth or into poverty—so that they can take over the key technical jobs of society. When children are born, no one knows which ones will have the ability
to become dentists, nuclear physicists, or engineers. To get the most talented people to compete with one another, society tries to motivate everyone to strive for success. It does this by arousing discontent—making people feel dissatisfied with what they have so that they will try to “better” themselves.

Most people, then, end up with strong desires to reach cultural goals such as wealth or high status, or to achieve whatever other objectives society holds out for them. However, not everyone has equal access to society’s institutionalized means, the legitimate ways of achieving success. Some people find their path to education and good jobs blocked. These people experience strain or frustration, which may motivate them to take a deviant path.

This perspective, known as strain theory, was developed by sociologist Robert Merton (1956, 1968). People who experience strain, he said, are likely to feel anomie, a sense of normlessness. Because mainstream norms (such as working hard or pursuing higher education) don’t seem to be getting them anywhere, people who experience strain find it difficult to identify with these norms. They may even feel wronged by the system, and its rules may seem illegitimate.

Table 8.1 compares people’s reactions to cultural goals and institutionalized means. The first reaction, which Merton said is the most common, is conformity, using socially acceptable means to try to reach cultural goals. In industrialized societies most people try to get good jobs, a good education, and so on. If well-paid jobs are unavailable, they take less desirable jobs. If they are denied access to Harvard or Stanford, they go to a state university. Others take night classes and go to vocational schools. In short, most people take the socially acceptable road.

**Four Deviant Paths** The remaining four responses, which are deviant, represent reactions to strain. Let’s look at each. Innovators are people who accept the goals of society but use illegitimate means to try to reach them. Crack dealers, for instance, accept the goal of achieving wealth, but they reject the legitimate avenues for doing so. Other examples are embezzlers, robbers, and con artists.

The second deviant path is taken by people who become discouraged and give up on achieving cultural goals. Yet they still cling to conventional rules of conduct. Merton called this response ritualism. Although ritualists have given up on getting ahead at work, they survive by following the rules of their job. Teachers whose idealism is shattered (who are said to suffer from “burnout”), for example, remain in the classroom, where they teach without enthusiasm. Their response is considered deviant because they cling to the job even though they have abandoned the goal, which may have been to stimulate young minds or to make the world a better place.

People who choose the third deviant path, retreatism, reject both the cultural goals and the institutionalized means of achieving them. Those who drop out of the pursuit of success by way of alcohol or drugs are retreatists. Although their withdrawal takes them on a different path, women who enter a convent or men a monastery are also retreatists.

The final type of deviant response is rebellion. Convinced that their society is corrupt, rebels, like retreatists, reject both society’s goals and its institutionalized means. Unlike retreatists, however, rebels seek to give society new goals. Revolutionaries are the most committed type of rebels.

In sum: Strain theory underscores the sociological principle that deviants are the product of society. Mainstream social values (cultural goals and institutionalized means to reach those goals) can produce strain (frustration, dissatisfaction). People who feel this strain are more likely than others to take the deviant (nonconforming) paths summarized in Table 8.1.

Illegitimate Opportunity Structures: Social Class and Crime

One of the more interesting sociological findings in the study of deviance is that the social classes have distinct styles of crime. Let’s see how unequal access to the institutionalized means to success helps to explain this.

Street Crime Functionalists point out that industrialized societies have no trouble socializing the poor into wanting to own things. Like others, the poor are bombarded with messages urging them to buy everything from X boxes and iPods to designer jeans and new cars. Television and movies show images of middle-class people enjoying luxurious lives. These images reinforce the myth that all full-fledged Americans can afford society’s many goods and services.

In contrast, the school system, the most common route to success, often fails the poor. The middle class runs it, and there the children of the poor confront a bewildering world, one that is at odds with their background. Their speech, with its nonstandard grammar, is often sprinkled with what the middle class considers obscenities. Their ideas of punctuality, as well as their poor preparation in paper-and-pencil skills, are also a mismatch with their new environment. Facing such barriers, the poor are more likely than their more privileged counterparts to drop out of school. Educational failure, in turn, closes the door on many legitimate avenues to financial success.

Not infrequently, however, a different door opens to the poor, one that Cloward and Ohlin (1960) called illegitimate opportunity structures. Woven into the texture of life in urban slums, for example, are robbery, burglary, drug dealing, prostitution, pimping, gambling, and other crimes, commonly called “hustles” (Liebow 1967/1999; Sanchez-Jankowski 2003; Anderson 1978, 1990/2006). For many of the poor, the “hustler” is a role model—glamorous, in control, the image of “easy money,” one of the few people in the area who comes close to attaining the cultural goal of success. For such reasons, then, these activities attract disproportionate numbers of the poor. As is discussed in the Down-to-Earth Sociology box on the next page, gangs are one way that the illegitimate opportunity structure beckons disadvantaged youth.

White-Collar Crime The more privileged social classes are not crime-free, of course, but for them different illegitimate opportunities beckon. They find other forms of crime to be functional. Physicians, for example, don’t hold up cabbies, but many do cheat Medicare. You’ve heard about bookkeepers who embezzle from their employers and corporate officers who manipulate stock prices. In other words, rather than mugging, pimping, and committing burglary, the more privileged encounter “opportunities” for evading income tax, bribing public officials, embezzlement, and so on. Sociologist Edwin Sutherland (1949) coined the term white-collar crime to refer to crimes that people of respectable and high social status commit in the course of their occupations.

A special form of white-collar crime is corporate crime, crimes committed by executives in order to benefit their corporation. For example, to increase corporate profits, Sears executives defrauded the poor of over $100 million. Their victims were so poor that they had filed for bankruptcy. To avoid a
For more than ten years, sociologist Martín Sánchez Jankowski (1991) did participant observation of thirty-seven African American, Chicano, Dominican, Irish, Jamaican, and Puerto Rican gangs in Boston, Los Angeles, and New York City. The gangs earned money through gambling, arson, mugging, armed robbery, and selling moonshine, drugs, guns, stolen car parts, and protection. Jankowski ate, slept, and sometimes fought with the gangs, but by mutual agreement he did not participate in drug dealing or other illegal activities. He was seriously injured twice during the study.

Contrary to stereotypes, Jankowski did not find that the motive for joining was to escape a broken home (there were as many members from intact families as from broken homes) or to seek a substitute family (the same number of boys said they were close to their families as those that said they were not). Rather, the boys joined to gain access to money, to have recreation (including girls and drugs), to maintain anonymity in committing crimes, to get protection, and to help the community. This last reason may seem surprising, but in some neighborhoods, gangs protect residents from outsiders and spearhead political change (Kontos et al. 2003). The boys also saw the gang as an alternative to the dead-end—and deadening—jobs held by their parents. Neighborhood residents are ambivalent about gangs. On the one hand, they fear the violence. On the other hand, many of the adults once belonged to gangs, some gangs provide better protection than the police, and gang members are the children of people who live in the neighborhood.

Particular gangs will come and go, but gangs will likely always remain part of the city. As functionalists point out, gangs fulfill needs of poor youth who live on the margins of society.

For your Consideration

What are the functions that gangs fulfill (the needs they meet)? Suppose that you have been hired as an urban planner by the City of Los Angeles. How could you arrange to meet the needs that gangs fulfill in ways that minimize violence and encourage youth to follow mainstream norms?

criminal trial, Sears pleaded guilty. This frightened the parent companies of Macy's and Bloomingdales, which had similar deceptive practices, and they settled with their debtors out of court (McCormick 1999). Similarly, Citigroup had to pay $70 million for preying on the poor (O'Brien 2004). None of the corporate thieves at Sears, Macy's, Bloomingdales, or Citigroup spent a day in jail.

Seldom is corporate crime taken seriously, even when it results in death. One of the most notorious corporate crimes involved the decision by Firestone executives to allow faulty tires to remain on U.S. vehicles—even though they were recalling the tires in Saudi Arabia and Venezuela. These tires cost the lives of about 200 Americans (White et al. 2001). No Firestone executive went to jail.

Consider this: Under federal law, causing the death of a worker by willfully violating safety rules is a misdemeanor punishable by up to six months in prison. Yet harassing a wild burro on federal lands is punishable by a year in prison (Barstow and Bergman 2003).

At $400 billion a year (Reiman 2004), “crime in the suites” actually costs more than “crime in the streets.” This refers only to dollar costs. No one has yet figured out a way to compare, for example, the suffering experienced by a rape victim with the pain felt by an elderly couple who have lost their life savings to white-collar fraud.

The greatest concern of Americans, however, is street crime. They fear the violent stranger who will change their life forever. As the Social Map on the next page shows, the chances of such an encounter depend on where you live. From this map, you can see that entire regions are safer or more dangerous than others. In general, the northern states are the safest, and the southern states the most dangerous.
Gender and Crime  A major change in the nature of crime is the growing number of female offenders. As Table 8.2 shows, women are committing a larger proportion of crime—from car theft to possession of illegal weapons. The basic reason for this increase is women’s changed social location. As more women work in factories, corporations, and

the professions, their opportunities for crime increase. Like men, women are also enticed by illegitimate opportunities.

**IN SUM** Functionalist conclude that much street crime is the consequence of socializing everyone into equating success with owning material possessions, while denying many in the lower social classes the legitimate means to attain that success. People from higher social classes encounter different opportunities to commit crimes. The growing crime rates of women illustrate how changing gender roles are giving more women access to illegitimate opportunities.

**The Conflict Perspective**

**Class, Crime, and the Criminal Justice System**

Two leading U.S. aerospace companies, Hughes Electronics and Boeing Satellite Systems, were accused of illegally exporting missile technology to China. The technology places the United States at risk, for it allowed China to improve its delivery system for nuclear weapons. The two companies pleaded guilty and paid fines. No executives went to jail. (Gerth 2003)

Contrast this corporate crime—which places you in danger—with stories in newspapers about people who are sentenced to several years in prison for stealing cars. How can a legal system that is supposed to provide “justice for all” be so inconsistent? According to conflict theorists, this question is central to the analysis of crime and the **criminal justice system**—the police, courts, and prisons that deal with people who are accused of having committed crimes. Let’s see what conflict theorists have to say about this.

---

This 1871 wood engraving depicts children as they are being paid for their day’s work in a London brickyard. In early capitalism, most street criminals came from the **marginal working class,** as did these children. It is the same today.

---

Most white-collar crime is a harmless nuisance, but some brings horrible costs. Shown here is Alisha Parker, who, with three siblings, was burned when the gas tank of her 1979 Chevrolet Malibu exploded after a rear-end collision. Although General Motors executives knew about the problem with the Malibu gas tanks, they had ignored it. Outraged at the callousness of GM’s conduct, the jury awarded these victims the staggering sum of $4.9 billion.
Power and Inequality

Conflict theorists regard power and social inequality as the main characteristics of society. They stress that the power elite that runs society also controls the criminal justice system. This group makes certain that laws are passed that will protect its position in society. Other norms, such as those that govern informal behavior (chewing with a closed mouth, appearing in public with combed hair, and so on), may come from other sources, but they are not as important. Such norms influence our everyday behavior, but they do not determine who has power or who gets sent to prison.

Conflict theorists see the most fundamental division in capitalist society as that between the few who own the means of production and the many who sell their labor. Those who buy labor, and thereby control workers, make up the capitalist class; those who sell their labor form the working class. Toward the most depressed end of the working class is the marginal working class: people who have few skills, who are subject to layoffs, and whose jobs are low paying, part time, or seasonal. This class is marked by unemployment and poverty. From its ranks come most of the prison inmates in the United States. Desperate, these people commit street crimes, and because their crimes threaten the social order that keeps the elite in power, they are punished severely.

The Law as an Instrument of Oppression

According to conflict theorists, the idea that the law operates impartially and administers a code that is shared by all is a cultural myth promoted by the capitalist class. These theorists see the law as an instrument of oppression, a tool designed by the powerful to maintain their privileged position (Spitzer 1975; Reiman 2004; Chambliess 2000, 2007). Because the working class has the potential to rebel and overthrow the current social order, when its members get out of line, the law comes down hard on them.

For this reason, the criminal justice system does not focus on the owners of corporations and the harm they do through manufacturing unsafe products, creating pollution, and manipulating prices—or the crimes of Hughes and Boeing mentioned on the previous page. Instead, it directs its energies against violations by the working class. The violations of the capitalist class cannot be ignored totally, however, for if they become too outrageous or oppressive, the working class might rise up and revolt. To prevent this, a flagrant violation by a member of the capitalist class is occasionally prosecuted. The publicity given to the case helps to stabilize the social system by providing evidence of the “fairness” of the criminal justice system.

Usually, however, the powerful are able to bypass the courts altogether, appearing instead before an agency that has no power to imprison (such as the Federal Trade Commission). People from wealthy backgrounds who sympathize with the intricacies of the corporate world direct these agencies. It is they who oversee most cases of manipulating the price of stocks, insider trading, violating fiduciary duty, and so on. Is it surprising, then, that the typical sanction for corporate crime is a token fine?

When groups that have been denied access to power gain that access, we can expect to see changes in the legal system. This is precisely what is occurring now. Racial-ethnic minorities and homosexuals, for example, have more political power today than ever before. In line with conflict theory, a new category called hate crime has been formulated. We analyze this change in a different context on pages 228–229.
IN SUM

From the perspective of conflict theory, the small penalties that are imposed for crimes committed by the powerful are typical of a legal system that has been designed by the elite (capitalists) to keep themselves in power, to control workers, and, ultimately, to stabilize the social order. From this perspective, law enforcement is a cultural device through which the capitalist class carries out self-protective and repressive policies.

Reactions to Deviance

Whether it involves cheating on a sociology quiz or holding up a liquor store, any violation of norms invites reaction. Reactions, though, vary with culture. Before we examine reactions in the United States, let’s take a little side trip to Greenland, an island nation three times the size of Texas located between Canada and Denmark. I think you’ll enjoy this little excursion in cultural diversity.

Cultural Diversity around the World

THE PRISON IN NUUK, the capital of Greenland, has no wall around it. It has no fence. It doesn’t even have bars.

The other day, Meeraq Lendehann, a convicted rapist, walked out of prison. He didn’t run or hide. He just walked out. Meeraq went to a store he likes to shop at, bought a CD of his favorite group, U2, and then walked back to the prison.

If Meeraq tires of listening to music, he can send e-mail and play games on a computer. Like other prisoners, he also has a personal TV with satellite hookup.

The prison holds 60 prisoners—the country’s killers, rapists, and a few thieves. The prisoners leave the prison to work at regular jobs, where they average $28,000 or so a year. But they have to return to the prison after work. And they are locked into their rooms at 9:30.

The prisoners have to work, because the prison charges them $150 a week for room and board. The extra money goes into their savings accounts, or to help support their families.

And, of course, the prisoners can have guns. At least during the summer. A major summer sport for Greenlanders is hunting reindeer and seals. Prisoners don’t want to miss out on the fun, so if they ask, they are given shotguns.

But gun use isn’t as easy as it sounds. Judges have set a severe requirement: The prisoners have to be accompanied by armed guards. If that isn’t bad enough, the judges have added another requirement—that the prisoners not get drunk while they hunt.

One woman prisoner who said she was going to a beauty salon got sidetracked and went to a bar instead. When it got late and she was quite drunk, she called the prison and asked someone to come and get her.

If someone from another culture asks about the prisoners running away, the head of the prison says, “Where would they run? It’s warm inside, and cold outside.”

Then, of course, the prisoners probably wouldn’t want to miss breakfast—a buffet of five kinds of imported cheese, various breads, marmalade, honey, coffee, and tea.

—Based on Naik 2004.

What Kind of Prison Is This?”

“for your Consideration

Greenland’s unique approach arose out of its history of hunting and fishing for a living. If men were locked up, they wouldn’t be able to hunt or fish, and their families would suffer. From this history has come the main goal of Greenland’s prison—to integrate offenders into society. This treatment helps prisoners slip back into village life after they have served their sentence. The incorrigibles, those who remain dangerous, about 20 men—are sent to a prison in Copenhagen, Denmark. Meeraq, the rapist, is given injections of androcur, a testosterone-reducing drug that lowers his sex drive. Alcoholics are given antabuse, a drug that triggers nasty reactions if someone drinks alcohol.

How do you think we could apply Greenland’s approach to the United States?"
Street Crime and Prisons
Let’s turn back to the United States. Figure 8.2 illustrates the remarkable growth in the U.S. prison population. The number of prisoners is actually higher than the total shown in this figure. If we add jail inmates, the total comes to over two million people—one out of every 143 citizens. Not only does the United States have more prisoners than any other nation, but it also has a larger percentage of its population in prison as well. The number of prisoners has grown so fast that the states have had to hire private companies to operate jails for them. About 110,000 prisoners are in these “private” jails (Sourcebook of Criminal Justice Statistics 2006:Table 6.32).

To better understand U.S. prisoners, let’s compare them with the U.S. population. As you look at Table 8.3 on the next page, several things may strike you. Almost all prisoners (87 percent) are ages 18 to 44, and almost all of them are men. Then there is this remarkable statistic: Although African Americans make up just 12.8 percent of the U.S. population, close to half of all prisoners are African Americans. On any given day, about

![Figure 8.2: How Much Is Enough? The Explosion in the Number of U.S. Prisoners](image)

How Much Is Enough? The Explosion in the Number of U.S. Prisoners
To better understand how remarkable this change is, compare the increase in U.S. prisoners with the increase in the U.S. population. Between 1970 and 2004, the U.S. population increased 43 percent, while the number of prisoners increased 764 percent, 18 times greater. If the number of prisoners had grown at the same rate as the U.S. population, there would be about 280,000 prisoners, only 13 percent of today’s total. (Or, if the U.S. population had increased at the same rate as that of U.S. prisoners, the U.S. population would be 3,650,000,000—more than the population of China, India, Canada, Mexico, and all of Europe combined.)

one out of eight African American men ages 20 to 34 is in jail or prison (Butterfield 2003). Finally, note how marriage and education—two of the major techniques society has of “anchoring” us—provide protection from prison.

As I mentioned earlier, social class funnels some people into the criminal justice system and diverts others away from it. This table illuminates the power of education, a major component of social class. You can see how people who drop out of high school have a high chance of ending up in prison—and how unlikely it is for a college graduate to have this unwelcome destination in life.

For about the past 20 years or so, the United States has followed a “get tough” policy. “Three strikes and you’re out” laws upon conviction for a third felony have become common. When someone is convicted of a third felony, judges are required to give a mandatory sentence, sometimes life imprisonment. While few of us would feel sympathy if a man convicted of a third brutal rape or a third murder were sent to prison for life, these laws have had unanticipated consequences, as you will see in the following Thinking Critically section.

### Thinking Critically

#### “Three Strikes and You’re Out!” Unintended Consequences of Well-Intended Laws

In the 1980s, the violent crime rate soared. Americans grew fearful, and they demanded that their lawmakers do something. Politicians heard the message, and they responded by passing the

“three strikes” law. Anyone who is convicted of a third felony receives an automatic mandatory sentence. Judges are not allowed to consider the circumstances. Some mandatory sentences carry life imprisonment.

In their haste to appease the public, the politicians did not limit the three-strike laws to violent crimes. And they did not consider that some minor crimes are considered felonies. As the functionalists would say, this has led to unanticipated consequences.

Here are some actual cases:

• In Los Angeles, a 27-year-old man was sentenced to 25 years for stealing a pizza (Cloud 1998).
• In New York City, a man who was about to be sentenced for selling crack said to the judge, “I’m only 19. This is terrible.” He then hurled himself out of a courtroom window, plunging to his death sixteen stories below (Cloud 1998).
• In Sacramento, a man who passed himself off as Tiger Woods to go on a $17,000 shopping spree was sentenced to 200 years in prison (Reuters 2001).
• In California, a man who stole 9 videotapes from Kmart was sentenced to 50 years in prison without parole. He appealed to the U.S. Supreme Court, which upheld his sentence (Greenhouse 2003).
• In Utah, a 25-year-old was sentenced to 55 years in prison for selling small bags of marijuana to a police informant. The judge who sentenced the man said the sentence was unjust (Madigan 2004).

for your Consideration

Apply the symbolic interactionist, functionalist, and conflict perspectives to mandatory sentencing. For symbolic interactionism, what do these laws represent to the public? How does your answer differ depending on what part of “the public” you are referring to? For functionalism, who benefits from these laws? What are some of their dysfunctions? For the conflict perspective, what groups are in conflict? Who has the power to enforce their will on others?

The Decline in Violent Crime

As you saw in Figure 8.2, judges have put more and more people in prison. In addition, legislators passed the three-strikes laws and reduced early releases of prisoners. As these changes occurred, the crime rate dropped sharply, which has led to a controversy in sociology. Some sociologists conclude that getting tough on criminals was the main reason for the drop in violent crime (Conklin 2003). Others point to higher employment, a drop in drug use, and even abortion (Rosenfeld 2002; Reiman 2004; Blumstein and Wallman 2006). This matter is not yet settled, but both tough sentencing and the economy seem to be important factors.

Recidivism

A major problem with prisons is that they fail to teach their clients to stay away from crime. Our recidivism rate—the percentage of former prisoners who are rearrested—is high. For those who are sentenced to prison for crimes of violence, within just three
years of their release, two out of three (62 percent) are rearrested, and half (52 percent) are back in prison (Sourcebook of Criminal Justice Statistics 2003:Table 6.52). Figure 8.3 shows recidivism by type of crime. It is safe to conclude that if—and this is a big if—the purpose of prisons is to teach people that crime doesn’t pay, they are colossal failures.

The Death Penalty and Bias

Capital punishment, the death penalty, is the most extreme measure the state takes. The death penalty is mired in controversy, arousing impassioned opposition and support on both moral and philosophical grounds. Advances in DNA testing have given opponents of the death penalty a strong argument: Innocent people have been sent to death row, and some have been executed. Others are passionate about retaining the death penalty, pointing to such crimes as those of the serial killers discussed in the Down-to-Earth Sociology box on the next page.

Apart from anyone’s personal position on the death penalty, it certainly is clear that the death penalty is not administered evenly. Consider geography: The Social Map on page 227 shows that where people commit murder greatly affects their chances of being put to death.

The death penalty also shows social class bias. As you know from news reports on murder and sentencing, it is rare for a rich person to be sentenced to death. Although the government does not collect statistics on social class and the death penalty, this common observation is borne out by the average education of the prisoners on death row. Most prisoners on death row (51 percent) have not finished high school (Sourcebook of Criminal Justice Statistics 2006:Table 6.81).

Figure 8.5 on page 228 shows gender bias in the death penalty. It is almost unheard of for a woman to be sentenced to death. Although women commit 9.6 percent of the
The Killer Next Door: Serial Murderers in Our Midst

I was stunned by the images. Television cameras showed the Houston police digging up dozens of bodies from under a boat storage shed. Fascinated, I waited impatiently for spring break. A few days later, I drove from Illinois to Houston, where 33-year-old Dean Corll had befriended Elmer Wayne Henley and David Brooks, two teenagers from broken homes. Together, they had killed 27 boys. Elmer and David would pick up young hitchhikers and deliver them to Corll to rape and kill. Sometimes they even brought him their high school classmates.

I talked to one of Elmer’s neighbors, as he was painting his front porch. His 15-year-old son had gone to get a haircut one Saturday morning; it was the last time he had seen his son alive. The police insisted that the boy had run away, and they refused to investigate. On a city map, I plotted the locations of the homes of the local murder victims. Many clustered around the homes of the teenage killers.

I was going to spend my coming sabbatical writing a novel on this case, but, to be frank, I became frightened and didn’t write the book. I didn’t know if I could recover psychologically if I were to immerse myself in grisly details day after day for months on end. One of these details was a piece of plywood, with a hole in each of its four corners. Corll and the boys would spreadeagle their victims handcuffed to the plywood. There, they would torture the boys (no girl victims) for hours. Sometimes, they would even pause to order pizza.

My interviews confirmed what has since become common knowledge about serial killers: They lead double lives so successfully that their friends and family are unaware of their criminal activities. Henley’s mother swore to me that her son was a good boy and couldn’t possibly be guilty. Some of his high school friends told me the same thing. They stressed that Elmer couldn’t be involved in homosexual rape and murder because he was interested only in girls. I conducted my interviews in Henley’s bedroom, and for proof of what they told me, his friends pointed to a pair of girls’ panties that were draped across a lamp shade.

Serial murder is the killing of several victims in three or more separate events. The murders may occur over several days, weeks, or years. The elapsed time between murders distinguishes serial killers from mass murderers, who do their killing all at once. Here are some infamous examples:

- Between 1962 and 1964, Albert De Salvo (“the Boston Strangler”) raped and killed 13 women.
- During the 1960s and 1970s, Ted Bundy raped and killed dozens of women in four states.
- In the 1970s, John Wayne Gacy raped and killed 33 young men in Chicago.
- Between 1979 and 1981, Wayne Williams killed 28 boys and young men in Atlanta.
- During the 1980s and 1990s, the “Green River” killer scattered the bodies of prostitutes around the countryside near Seattle, Washington. In 2003, Gary Ridgway was convicted of the crimes and given 48 consecutive life sentences for killing 48 women.
- In 2005, in Wichita, Kansas, Dennis Rader pleaded guilty as the BTK (Bind, Torture, and Kill) strangler, a name he had proudly given himself. His 10 killings spanned 1974 to 1991.
- The serial killer with the most victims appears to be Harold Shipman of Manchester, England. From 1977 to 2000, this quiet, unassuming physician killed 230 to 275 of his elderly women patients. While making housecalls, he gave the women lethal injections.
- One of the most bizarre serial killers was Jeffrey Dahmer of Milwaukee. Dahmer fried and ate parts of his victims. When he did, he felt a “unity” with the victim.

Almost all serial killers are men, but an occasional woman joins this list of infamy:

- In North Carolina, Blanche Taylor Moore used arsenic to kill her father, her first husband, and a boyfriend. She was tripped up in 1986 when she tried to poison her current husband.
- In 1987 and 1988, Dorothea Montalvo Puente, who operated a boarding house in Sacramento, killed 7 of her boarders. Her motive was to collect their Social Security checks.
- In Missouri, from 1986 to 1989, Faye Copeland and her husband killed 5 transient men.
- In the late 1980s and early 1990s, Aileen Wuornos, hitchhiking along Florida’s freeways, killed 7 men after having sex with them.
Many serial killers are motivated by lust and are sexually aroused by killing, so the FBI sometimes uses the term “lust murder.” As with Ted Bundy and Jeffrey Dahmer, some have sex with their dead victims. Bundy returned day after day to the countryside to copulate with the corpses of his victims. Other serial killers, however, are more “garden variety,” motivated by greed, like Dorothea Puente, who killed for money.

Is serial murder more common now than it used to be? Not likely. In the past, police departments had little communication with one another. When killings occurred in different jurisdictions, seldom did anyone connect them.

Today’s more efficient communications, investigative techniques, and DNA matching make it easier for the police to conclude that a serial killer is operating in an area. Part of the perception that there are more serial killers today is also due to ignorance of our history: In our frontier past, serial killers went from ranch to ranch. Some would say that mass murderers wiped out entire villages of Native Americans.

**Consideration**

Do you think that serial killers should be given the death penalty? Why or why not? How do your social locations influence your opinion?

---

**serial murder** the killing of several victims in three or more separate events

murders, they make up only 1.6 percent of death row inmates (Sourcebook of Criminal Justice Statistics 2006:Table 3.129). It is possible that this statistic reflects not only gender bias but also the relative brutality of the women’s murders. We need research to determine this.

Bias used to be so flagrant that it once put a stop to the death penalty. Donald Parthington (1965), a lawyer in Virginia, was shocked by the bias he saw in the courtroom, and he decided to document it. He found that 2,798 men had been convicted for rape and attempted rape in Virginia between 1908 and 1963—56 percent whites and 44 percent blacks. For attempted rape, 13 had been executed. For rape, 41 men had been executed. All those executed were black. Not one of the whites was executed.

After listening to evidence like this, in 1972 the Supreme Court ruled in *Furman v. Georgia* that the death penalty, as applied, was unconstitutional. The execution of prisoners stopped—but not for long. The states wrote new laws, and in 1977 they again began to execute prisoners. Since then, 67 percent of those put to death have been white and 33 percent African American (Statistical Abstract 2007:Table 340). (Latinos are evidently counted as whites in this statistic.) Table 8.4 on the next page shows the race-ethnicity of the prisoners who are on death row.

Legal Change

Did you know that it is a crime in Saudi Arabia for a woman to drive a car (Fattah 2007)? A crime in Florida to sell alcohol before 1 p.m. on Sundays? Or illegal in Wells, Maine, to advertise on tombstones? As has been stressed in this chapter, deviance, including the form called crime, is relative. It varies from one society to another, and from group to group within a society. Crime also varies from one time period to another, as opinions change or as different groups gain access to power.

Hate crimes are an example of legal change, the topic of the next Thinking Critically Section.

Thinking Critically

Changing Views: Making Hate a Crime

Because crime consists of whatever acts authorities decide to assign that label, new crimes emerge from time to time. A prime example is juvenile delinquency, which Illinois lawmakers designated a separate type of crime in 1899. Juveniles committed crimes before this time, of course, but youths were not considered to be a separate type of lawbreaker. They were just young people who committed crimes, and they were treated the same as adults who committed the same crime. Sometimes new technology leads to new crimes. Motor vehicle theft, a separate crime in the United States, obviously did not exist before the automobile was invented.

Hate crimes, which range from murder and injury to defacing property with symbols of hatred, include arson, the suspected cause of the fire at this synagogue.
In the 1980s, another new crime was born when state governments developed the classification *hate crime*. This is a crime that is motivated by *bias* (dislike, hatred) against someone’s race-ethnicity, religion, sexual orientation, disability, or national origin. Before this, of course, people attacked others or destroyed their property out of these same motivations, but in those cases the motivation was not the issue. If someone injured or killed another person because of that person’s race-ethnicity, religion, sexual orientation, national origin, or disability, he or she was charged with assault or murder. Today, motivation has become a central issue, and hate crimes carry more severe sentences than do the same acts that do not have hatred as their motive. Table 8.5 summarizes the victims of hate crimes.

We can be certain that the “evolution” of crime is not yet complete. As society changes and as different groups gain access to power, we can expect the definitions of crime to change accordingly.

**for your Consideration**

Why should we have a separate classification called hate crime? Why aren’t the crimes of assault, robbery, and murder adequate? As one analyst (Sullivan 1999) said: “Was the brutal murder of gay college student Matthew Shepard [a hate crime] in Laramie, Wyoming, in 1998 worse than the abduction, rape, and murder of an eight-year-old Laramie girl [not a hate crime] by a pedophile that same year?”

How do you think your social location (race-ethnicity, gender, social class, sexual orientation, or physical ability) affects your opinion?

### The Trouble with Official Statistics

Both the findings of symbolic interactionists (that stereotypes operate when authorities deal with groups such as the Saints and the Roughnecks) and the conclusion of conflict theorists (that the criminal justice system exists to serve the ruling elite) demonstrate the need for caution in interpreting official statistics. Crime statistics do not have an objective, independent existence. They are not like oranges that you pick out in a grocery store. Rather, crime statistics are a human creation. One major element in producing them is the particular laws that exist. Another is how those laws are enforced. Still another is how officials report their statistics. Change these factors, and the statistics also change.

Consider this: According to official statistics, working-class boys are clearly more delinquent than middle-class boys. Yet, as we have seen, who actually gets arrested for what is influenced by social class, a point that has far-reaching implications. As symbolic interactionists point out, the police follow a symbolic system as they enforce the law. Their ideas of “typical criminals” and “typical good citizens,” for example, permeate their work. The more a suspect matches their stereotypes (which they call “criminal profiles”), the more likely that person is to be arrested. **Police discretion**, the decision of whether to arrest someone or even to ignore a matter, is a routine part of police work. Consequently, official crime statistics always reflect these and many other biases.
Reactions to deviants vary from such mild sanctions as frowns and stares to such severe responses as imprisonment and death. Some sanctions are formal—court hearings, for example—but most are informal, as when friends refuse to talk to each other. One sanction is to label someone a deviant, which can have powerful consequences for the person’s life, especially if the label closes off conforming activities and opens deviant ones. The degradation ceremony, in which someone is publicly labeled “not one of us,” is a powerful sanction. So is imprisonment. Official statistics must be viewed with caution, for they reflect biases.

The Medicalization of Deviance: Mental Illness

Another way in which society deals with deviance is to “medicalize” it. Let’s look at what this entails.

Neither Mental Nor Illness? To medicalize something is to make it a medical matter, to classify it as a form of illness that properly belongs in the care of physicians. For the past hundred years or so, especially since the time of Sigmund Freud (1856–1939), the Viennese physician who founded psychoanalysis, there has been a growing tendency toward the medicalization of deviance. In this view, deviance, including crime, is a sign of mental sickness. Rape, murder, stealing, cheating, and so on are external symptoms of internal disorders, consequences of a confused or tortured mind.

Thomas Szasz (1986, 1996, 1998), a renegade in his profession of psychiatry, argues that mental illnesses are neither mental nor illnesses. They are simply problem behaviors. Some forms of so-called mental illnesses have organic causes; that is, they are physical illnesses that result in unusual perceptions or behavior. Some depression, for example, is caused by a chemical imbalance in the brain, which can be treated by drugs. The depression, however, may appear in the forms of crying, long-term sadness, and lack of interest in family, work, school, or one’s appearance. When someone becomes deviant in ways that disturb others, and when these others cannot find a satisfying explanation for why the person is “like that,” a “sickness in the head” is often taken as the cause of the unacceptable behavior.

Attention deficit disorder (ADD) is an excellent example. As Szasz says, “No one explains where this disease came from, why it didn’t exist 50 years ago. No one is able to diagnose it with objective tests.” It is diagnosed by a teacher or a parent complaining about a child misbehaving. Misbehaving children have been a problem throughout history, but now their problem behavior has become a sign of mental illness.

All of us have troubles. Some of us face a constant barrage of problems as we go through life. Most of us continue the struggle, perhaps encouraged by relatives and friends and motivated by job, family responsibilities, religious faith, and life goals. Even when the odds seem hopeless, we carry on, not perfectly, but as best we can.

Some people, however, fail to cope well with life’s challenges. Overwhelmed, they become depressed, uncooperative, or hostile. Some strike out at others, while some, in Merton’s terms, become retreatists and withdraw into their apartments or homes, not wanting to come out. These are behaviors, not mental illnesses, stresses Szasz. They may be inappropriate coping devices, but they are coping devices nevertheless, not mental illnesses. Thus, Szasz concludes that “mental illness” is a myth foisted on a naive public by a medical profession that uses pseudoscientific jargon in order to expand its area of control and force nonconforming people to accept society’s definitions of “normal.”

Szasz’s extreme claim forces us to look anew at the forms of deviance that we usually refer to as mental illness. To explain behavior that people find bizarre, he directs our attention not to causes hidden deep within the “subconscious,” but, instead, to how people learn such behaviors. To ask, “What is the origin of someone’s inappropriate or bizarre behavior?” then becomes similar to asking “Why do some women steal?” “Why do some men rape?” “Why do some teenagers cuss their parents and stalk out of...
the room, slamming the door?" The answers depend on those people’s particular experiences in life, not on an illness in their mind. In short, some sociologists find Szasz’s renegade analysis refreshing because it indicates that social experiences, not some illness of the mind, underlie bizarre behaviors—as well as deviance in general.

**The Homeless Mentally Ill**

Jamie was sitting on a low wall surrounding the landscaped courtyard of an exclusive restaurant. She appeared unaware of the stares that were elicited by her layers of mismatched clothing, her matted hair and dirty face, and the shopping cart that overflowed with her meager possessions.

When I saw Jamie point to the street and concentrate, slowly moving her finger horizontally. I asked her what she was doing.

“I’m directing traffic,” she replied. “I control where the cars go. Look, that one turned right there,” she said, now withdrawing her finger.

“Really?” I said.

After a while she confided that her cart talked to her.

“Really?” I said again.

“Yes,” she replied. “You can hear it, too.” At that, she pushed the shopping cart a bit.

“Did you hear that?” she asked.

When I shook my head, she demonstrated again. Then it hit me. She was referring to the squeaking wheels!

I nodded.

When I left, Jamie was pointing to the sky, for, as she told me, she also controlled the flight of airplanes.

To most of us, Jamie’s behavior and thinking are bizarre. They simply do not match any reality we know. Could you or I become like Jamie?

Suppose for a bitter moment that you are homeless and have to live on the streets. You have no money, no place to sleep, no bathroom. You do not know if you are going to eat, much less where. You have no friends or anyone you can trust, and you live in constant fear of rape and other violence. Do you think this might be enough to drive you over the edge?

Consider just the problems involved in not having a place to bathe. (Shelters are often so dangerous that many homeless people prefer to sleep in public settings.) At first, you try to wash in the rest rooms of gas stations, bars, the bus station, or a shopping center. But you are dirty, and people stare when you enter and call the management when they see you wash your feet in the sink. You are thrown out and told in no uncertain terms never to come back. So you get dirtier and dirtier. Eventually, you come to think of being dirty as a fact of life. Soon, maybe, you don’t even care. The stares no longer bother you—at least not as much.

No one will talk to you, and you withdraw more and more into yourself. You begin to build a fantasy life. You talk openly to yourself. People stare, but so what? They stare anyway. Besides, they are no longer important to you.

Jamie might be mentally ill. Some organic problem, such as a chemical imbalance in her brain, might underlie her behavior. But perhaps not. How long would it take you to exhibit bizarre behaviors if you were homeless—and hopeless? The point is that just being on the streets can cause mental illness—or whatever we want to label socially inappropriate behaviors that we find difficult to classify. Homelessness and mental illness are reciprocal: Just as “mental illness” can cause homelessness, so the trials of being homeless, of living on cold, hostile streets, can lead to unusual thinking and behaviors.
The Need for a More Humane Approach

As Durkheim (1895/1964:68) pointed out, deviance is inevitable—even in a group of saints.

Imagine a society of saints, a perfect cloister of exemplary individuals. Crimes, properly so called, will there be unknown; but faults which appear invisible to the layman will create there the same scandal that the ordinary offense does in ordinary society.

With deviance inevitable, one measure of a society is how it treats its deviants. Our prisons certainly don’t say much good about U.S. society. Filled with the poor, they are warehouses of the unwanted. They reflect patterns of broad discrimination in our larger society. White-collar criminals continue to get by with a slap on the wrist while street criminals are punished severely. Some deviants, who fail to meet current standards of admission to either prison or mental hospital, take refuge in shelters, as well as in cardboard boxes tucked away in urban recesses. Although no one has the answer, it does not take much reflection to see that there are more humane approaches than these.

Because deviance is inevitable, the larger issues are to find ways to protect people from deviant behaviors that are harmful to themselves or others, to tolerate those behaviors that are not harmful, and to develop systems of fairer treatment for deviants. In the absence of fundamental changes that would bring about a truly equitable social system, most efforts are, unfortunately, like putting a Band Aid on a gunshot wound. What we need is a more humane social system, one that would prevent the social inequalities that are the focus of the next four chapters.

Summary and Review

What Is Deviance?
From a sociological perspective, deviance (the violation of norms) is relative. What people consider deviant varies from one culture to another and from group to group within the same society. As symbolic interactionists stress, it is not the act, but the reactions to the act, that make something deviant. All groups develop systems of social control to punish deviants—those who violate their norms. Pp. 204–208.

How do sociological and individualistic explanations of deviance differ?
To explain why people deviate, sociobiologists and psychologists look for reasons within the individual, such as genetic predispositions or personality disorders. Sociologists, in contrast, look for explanations outside the individual, in social experiences. Pp. 208–209.

The Symbolic Interactionist Perspective
How do symbolic interactionists explain deviance?
Symbolic interactionists have developed several theories to explain deviance such as crime (the violation of norms that are written into law). According to differential association theory, people learn to deviate by associating with others. According to control theory, each of us is propelled toward deviance, but most of us conform because of an effective system of inner and outer controls. People who have less effective controls deviate. Pp. 209–211.

Labeling theory focuses on how labels (names, reputations) help to funnel people into or divert them away from deviance. People who commit deviant acts often use techniques of neutralization to continue to think of themselves as conformists. Pp. 211–213.

The Functionalist Perspective
How do functionalists explain deviance?
Functionalists point out that deviance, including criminal acts, is functional for society. Functions include affirming norms and promoting social unity and social change. According to strain theory, societies socialize their members into desiring cultural goals. Many people are unable to achieve these goals in socially acceptable ways—that is, by institutionalized means. Deviants, then, are people who either give up on the goals or use deviant means to attain them. Merton identified five types of responses to
cultural goals and institutionalized means: conformity, innovation, ritualism, retreatism, and rebellion. Illegitimate opportunity theory stresses that some people have easier access to illegal means of achieving goals. Pp. 213–219.

**The Conflict Perspective**

**How do conflict theorists explain deviance?**

Conflict theorists take the position that the group in power (the capitalist class) imposes its definitions of deviance on other groups (the working class and the marginal working class). From the conflict perspective, the law is an instrument of oppression used to maintain the power and privilege of the few over the many. The marginal working class has little income, is desperate, and commits highly visible property crimes. The ruling class directs the criminal justice system, using it to punish the crimes of the poor while diverting its own criminal activities away from this punitive system. Pp. 219–221.

**Reactions to Deviance**

**What are common reactions to deviance in the United States?**

In following a “get-tough” policy, the United States has imprisoned millions of people. African Americans and Latinos make up a disproportionate percentage of U.S. prisoners. The death penalty shows biases by geography, social class, race–ethnicity, and gender. In line with conflict theory, as groups gain political power, their views are reflected in the criminal code. Hate crime legislation was considered in this context. Pp. 221–229.

**Are official statistics on crime reliable?**

The conclusions of both symbolic interactionists (that the police operate with a large measure of discretion) and conflict theorists (that the capitalist class controls the legal system) indicate that we must be cautious when using crime statistics. P. 229.

**What is the medicalization of deviance?**

The medical profession has attempted to medicalize many forms of deviance, claiming that they represent mental illnesses. Thomas Szasz disagrees, asserting that they are problem behaviors, not mental illnesses. Research on homeless people illustrates how problems in living can lead to bizarre behavior and thinking. Pp. 230–231.

**What is a more humane approach?**

Deviance is inevitable, so the larger issues are to find ways to protect people from deviance that harms themselves and others, to tolerate deviance that is not harmful, and to develop systems of fairer treatment for deviants. P. 231.

**Thinking Critically about Chapter 8**

1. Select some deviance with which you are personally familiar. (It does not have to be your own—it can be something that someone you know did.) Choose one of the three theoretical perspectives to explain what happened.
2. As is explained in the text, deviance can be mild. Recall some instance in which you broke a social rule in dress, etiquette, or speech. What was the reaction? Why do you think people reacted like that? What was your response to their reactions?
3. What do you think should be done about the U.S. crime problem? What sociological theories support your view?
